Career Objective

Innovative and detail-oriented Software Engineer seeking an opportunity to apply problem-solving, critical thinking, and creativity to develop efficient, scalable solutions.

Current Projects - Any project with professional listed, is for a company or an institution that has contracted with me to complete their front end development for their software or web application..

MedView - This is a project that began development in May of 2025. This project is a web based application (React, JSX, HTML, CSS). This project aims to bring productivity to all healthcare professionals across the US. This project is a UI webpage based application that allows EMT's, Paramedics, Doctors, Nurses, and all other healthcare professionals to view their protocols just by the click of a couple buttons. As an EMT myself, although we all had training, there are times where you simply had a memory lapse and need to see how to treat a patient or to see the side effects of a drug being administered in the field. Not only does this help the healthcare professionals but it helps the patients such as yourself so you know that your healthcare professional is doing everything they can to treat your condition. MediView is still in progress and is currently being saved locally to prevent any code leakage pending copyright.

(Professional) Long Lawn Care - This is a project that began May of 2025. It is a responsive react based website that allows for customer management, customer account management as well as showing services provided from the landscaping business, please bear in mind, this is NOT my business. This application web application includes HTML, CSS and JavaScript (using tailwind as a CSS framework)
